

WEIYE XU

Seattle, WA ◇ xuwy24@uw.edu ◇ +1 425-876-0310 ◇ linkedin.com/in/weiye-xu-gix2024

SUMMARY

Dual-degree M.S. student in Computer Science (University of Washington and Tsinghua University) working at the intersection of machine learning, intelligent sensing, and human-computer interaction. Three first-author papers at ACM CHI, UIST, and IMWUT, 10 patents, and research shipped to production at Ant Group; owns the full loop from hardware prototype and data collection to model design, deployment, and user study.

EDUCATION

University of Washington, Seattle, WA 09/2024 – 03/2027 (expected)

M.S. in Technology Innovation (Computer Science / HCI track), Global Innovation Exchange, dual degree with Tsinghua

Tsinghua University, Beijing, China 09/2024 – 06/2027 (expected)

M.S. in Computer Science, Global Innovation Exchange ◇ GPA 4.0/4.0, ranked 1st in cohort ◇ Advisor: Prof. Yuanchun Shi

Tsinghua University, Beijing, China 09/2020 – 06/2024

B.Eng. in Computer Science and Technology ◇ GPA 3.73/4.0 ◇ Coursework: Data Structures & Algorithms, Object-Oriented Programming, Software Engineering, Artificial Intelligence, Computer Graphics, Human-Computer Interaction, Formal Languages & Automata, Digital Logic, Probability & Statistics

HONORS & AWARDS

- Inventor on 10 granted or filed patents (9 China, 1 United States).
- National Scholarship for Graduate Students, China Ministry of Education, 2025 (top 1%).
- Outstanding Research Scholarship, Tsinghua University, 2024.

TECHNICAL SKILLS

Languages: Python (expert), C/C++, JavaScript (Vue), Bash/Shell, VHDL

Machine Learning: PyTorch, NumPy/SciPy/Pandas; domain-adversarial learning, multimodal sensor fusion, time-series/audio modeling, LLM/RAG

Signal Processing: acoustic feature extraction, multi-channel audio, IMU/PPG, RF (RSSI/phase), impedance spectra

Hardware & Systems: PCB design (Eagle), sensor integration, multi-channel data acquisition, Arduino, 3D printing, machine knitting; Linux, Git, Docker, CI/CD, DVC

AI Developer Tools: Claude Code, OpenAI Codex (daily use for code generation, refactoring, and test writing)

INDUSTRY EXPERIENCE

Ant Group (Alipay) 06/2026 – 09/2026

Machine Learning Engineer Intern, Trust & Safety Hangzhou, China

- Owned end-to-end user verification for smartwatch tap-to-pay (payment-time verification and session keep-alive): designed and ran a consented data collection protocol across 450+ sessions and built a data-cleaning pipeline that detected and repaired 100% of labeled defects.
- Trained an IMU + PPG multimodal verification model (CAME-JEPA) reaching 10% FRR at 90% TRR in a low-assurance setting, and designed the user interaction flow around it.
- Contributed the architecture survey and data preprocessing for a mixture-of-experts foundation model over heterogeneous wearable sensor streams.

Ant Group (Alipay) 07/2025 – 02/2026

Machine Learning Engineer Intern, Trust & Safety Beijing, China

- Designed and built a synchronized 16-channel microphone smart-glasses prototype with a Python data-acquisition pipeline at 96 kHz; adopted team-wide as the data collection platform for voice authentication and noise-suppression training, and reused to explore air-/bone-conduction fusion architectures.
- Developed a domain-adversarial voice anti-spoofing model reaching state-of-the-art 98% balanced accuracy; the proposed inter-channel time-delay/energy feature scheme shipped in Alipay's production voice verification stack.
- Filed 5 patents (3 granted, assigned to Ant Group and Tsinghua University).

VITURE 01/2025 – 04/2025

Software Development Engineer Intern Beijing, China

- Built a real-time YOLOv7 finger-tracking platform driven by the phone's front camera so a smartphone can act as a touch controller for AR glasses; implemented implicit calibration via progressive learning that pairs touchscreen contact events with tracked fingertip positions, delivering a working proof-of-concept endorsed by the CEO.

RESEARCH EXPERIENCE

KnitID: Machine-Knitted RFID Antennas for Battery-Free Sensing and Interaction

11/2025 – Present

Graduate Research Assistant, WI Lab, University of Washington

- Designed a machine-knitted UHF RFID antenna by integrating magnet wire into the loop-over-loop structure of industrial knitting, reaching ~ 1.4 m on-body read range in a 60×8 mm footprint; mapped the design space (wire coating, knit structure, wale count, conductive length) via far-field simulation and empirical sweeps.
- Built a multimodal RSSI + phase sensing pipeline and a bidirectional-GRU localization model with physics-based constraints (TECHIN 600 independent study): 100% tag identification, $\sim 85\%$ interaction recognition accuracy, ~ 6 cm localization error.
- Demonstrated battery-free textile interfaces in robot-arm control, exercise tracking, and smart-wardrobe applications.
- Co-first author; ACM UIST 2026 poster, full paper submitted to ACM CHI 2027.

AuthGlass: Voice Liveness Detection and Authentication on Smart Glasses

07/2025 – 02/2026

Project lead, Pervasive HCI Lab, Tsinghua University, in collaboration with Ant Group

- Designed and fabricated two generations of a synchronized 16-channel microphone-array smart-glasses prototype (14 air-conduction and 2 bone-conduction microphones) to capture the acoustic field around the wearer's head and defend voice unlock against replay attacks.
- Collected a 42-participant genuine/replay speech dataset (AuthGlass); proposed sound-field features from inter-channel time delay and energy distribution, trained with a domain-adversarial network to reach 98% balanced accuracy.
- First-author paper accepted at ACM IMWUT 2026 (to appear); code and dataset to be open-sourced.

BIT: Battery-Free, IC-Less and Wireless Smart Textile Interface and Sensing System

09/2023 – 11/2024

Project lead, XD Lab (Simon Fraser University) and Pervasive HCI Lab (Tsinghua University)

- Proposed a wireless-power-transfer sensing model for textiles based on multi-resonant circuits and near-field coil coupling, and the first hardware–algorithm co-design that recovers sensor state from impedance spectrum analysis.
- Fabricated a VNA-based auto-solver and several smart textile interfaces, including a glove and a shirt (Eagle PCB, soldering, auto-embroidery).
- First-author paper published at ACM CHI 2025; first inventor on a U.S. patent assigned to Florida State University.

PROJECTS

CocoIndex-Code: Lightweight AST-Based Semantic Code Search (open-source contributor)

06/2026 – Present

- Designing and implementing the text-search path (search --text, 1,000+ lines) of a Python code search CLI built on the CocoIndex incremental indexing engine (2.7k stars), targeting high-volume context retrieval for AI coding agents; iterated on query model and scope with maintainers through upstream code review.

PaperFriend: LLM-Powered Paper Reading Assistant

03/2024 – 06/2024

Course project, Department of Computer Science, Tsinghua University (advised by Prof. Jie Tang)

- Built a retrieval-augmented generation (RAG) pipeline over arXiv with LLM-driven paper recommendation, context-aware summarization, automatic question generation for self-testing, and user background analysis.
- A 10-participant user study showed measurable gains in reading efficiency and comprehension over conventional reading, with consistently positive usability feedback.

PUBLICATIONS (3 first-author papers at premier ACM HCI venues)
